### How Are You Protecting YOUR HEARING?

Exposure to excessive noise — not age — is the leading cause of hearing loss, and continued exposure can worsen preexisting hearing problems. Make sure you're protected from noise at work, at concerts, or working with power tools by using the best, most comfortable hearing protection available!

We now carry the full line of custom-fit, medical-grade silicone earplugs from industry-leading manufacturer ACS. These are the highest-quality, most comfortable earplugs we have ever used, and we are excited to now be offering them to our patients. We carry their custom-fit, professional-quality musicians' monitors as well!

# PARTNERS in Hearing Care

Does everyone seem to mumble when they speak? Do you often ask people to repeat themselves? Is it hard to understand speech in noisy environments? Do you have ringing in one or both ears?

If “yes” marks the spot for any of these questions, then you, like an estimated 360 million people worldwide, may have hearing loss.

The great news? Most hearing can be effectively treated, and your local audiologist — an expert in hearing, tinnitus, and balance disorders — is clinically trained to do just that.

Hearing care is just as important as regular dental visits, annual physicals, and vision checkups, but how do you get started, and what do hearing care specialists do? Here are some ways they can help you maximize your hearing health for a better quality of life.

#### Evaluating and Diagnosing Hearing Problems

Your local hearing care specialist can perform diverse tests to determine the state of your hearing and identify the type, severity, and cause of any hearing difficulties.

**Treating Hearing Loss** With professional expertise, advanced hearing technology, and knowledge of your lifestyle and listening needs, hearing care specialists provide hearing aid solutions tailored for you.

**Treating Tinnitus** Hearing care specialists can significantly reduce the impact of ringing in the ears and other symptoms of tinnitus, which affects more than 50 million Americans.

#### Diagnosing and Treating Balance Issues

Hearing care specialists can get to the bottom of dizziness and poor balance, getting you back to feeling better.

**Removing Wax Buildup** Ears naturally remove wax as needed, but excess buildup — which can cause hearing loss, balance issues, and other problems — should be handled by the professionals.

**Offering Custom Noise Protection** Whether you play in a band, work with loud machinery, or are otherwise exposed to dangerous noise levels, audiologists can recommend and customize ear protection for your individual needs.

**Maintaining Your Hearing Technology** Hearing care specialists help you keep your devices working their best by cleaning, checking, and repairing them.

**Providing Continuing Care** Hearing care specialists care about your hearing for life, and they can adjust treatments as your lifestyle and listening needs change.

#### HEARING CARE SPECIALISTS ARE YOUR PARTNERS IN HEARING HEALTH CARE.

If you or a loved one is experiencing symptoms of hearing loss, tinnitus, or balance issues, or if your hearing needs have changed, call us for an appointment today at **610.866.2929**.
